Lab 9 — Use-Case Sprint: One Product Photo to a Published 15-Second Ad

Topic 03 · Apply new AI technologies to Improve Video Production · Maps to: A7 — evaluate new technologies; K4 — industry standards before publishing

Run the whole pipeline on a real use case. Start from one product photo, shoot a campaign with the product-photoshoot skill, make a 15-second ad in Cinema Studio, compare two video models on the same prompt, then export, label and publish.

> **You'll build:** A 15-second ad (16:9 and 9:16) made from one product photo, a two-model comparison, and a publish-ready post.
> **Tools:** Higgsfield: Supercomputer (/product-photoshoot), Cinema Studio, Seedance 2.5, Kling 4.0, TikTok publishing

Steps

1. Upload the product photo from assets/ (or your own product) to Supercomputer with a character sheet and a street location.
2. Type /product-photoshoot and ask for six vertical 9:16 photos: three with your character, three of the product alone.
3. Open Cinema Studio, attach the product, the character and the location as references, and write the 15-second ad with the five-shot structure on the prompts page. Generate a Draft first.
4. Run the same prompt on a second model (Kling 4.0 or Cinema Studio 4.0) and compare with assets/model-comparison.csv: product accuracy, motion, audio, credits, render time.
5. Finalise the winner in 1080p and reframe a 9:16 version.
6. Pre-publish check: AI-generated label on, no unlicensed logos or music, consent recorded, caption and hashtags ready.
7. Publish to TikTok from Higgsfield (connect your account, post as private or only-me in class), or download the MP4 for the TMS upload. Screenshot the comparison table and the post settings for your evidence.

Prompts

Open **prompts.html** in this folder for one-click copy (or prompts.pdf to print).

CAMPAIGN STILLS (/PRODUCT-PHOTOSHOOT)

```
/product-photoshoot Make a cool photoshoot for this bottle with our runner in the three Singapore locations we picked. Six photos: three with her and three of just the bottle. Make them vertical, 9:16.
```

15-SECOND AD — FIVE SHOTS (CINEMA STUDIO)

```
Scene context: A 15-second premium commercial for SOLA, a matte-black insulated steel bottle, at sunrise on a Singapore rooftop running track.
References: @prop_sola — the bottle, 100% as shown. @char_runner — runner, 100% as shown.
Shots (hard cut between each):
1. 0–3s: extreme close-up, first sun ray slides across the bottle. Slow push-in.
2. 3–6s: medium, the runner grabs it mid-stride. Tracking.
3. 6–9s: close-up, she drinks; ice clinks. Slow motion.
4. 9–12s: wide, she runs along the rooftop edge, skyline glowing. Drone pulls back.
5. 12–15s: hero packshot, clean space at top for the logo.
Sound: upbeat electronic beat building to a hit on the packshot, footsteps, ice, whoosh on each cut. No on-screen text.
```

PICK A USE CASE (VARIATION)

```
Rewrite this ad brief as a 15-second AI micro-drama cliffhanger: same product, two characters, one twist in the last 3 seconds, vertical 9:16, dialogue in one line.
```

Mock assets (assets/)

- sample-product-sola.jpg — the product photo to start from
- campaign-brief.pdf — SOLA brief, audience, platforms, mandatory label
- model-comparison.csv — model, product accuracy, motion, audio, credits, time, verdict
- publish-checklist.pdf — AI label, rights, consent, caption, hashtags

Evidence to keep

Screenshot these. The Practical Performance asks you to paste screenshots like them under each task.

- Your two-model comparison table
- The final 15 s ad (upload the MP4 to the TMS) and the publish settings

Check your work

> The ad runs 15 s in both ratios, keeps the product accurate in every shot, the comparison table justifies the chosen model on at least three criteria, and the post carries an AI-generated label.
