Lab 7 — Fix What Fails: Remedial Actions in Higgsfield

Topic 03 · Apply New AI Technologies to Improve Video Production · Maps to: A6 — develop remedial actions for footage that does not meet requirements; K4 — industry quality standards

Take every FAIL from your Lab 6 checklist and match it to a Higgsfield fix: replace the wrong object, upscale soft footage, reframe for vertical, or regenerate only the broken shot with the same Elements. Apply at least two fixes and re-score.

> **You'll build:** A remediated cut with a before/after checklist and a remedy table (issue, cause, Higgsfield fix, result).
> **Tools:** Higgsfield: Genjutsu Replace Object, Upscale, Reframe, Cinema Studio (regenerate a shot)

Steps

1. Copy every FAIL from your Lab 6 checklist into assets/remedy-table.csv with its likely cause.
2. Match each issue to a fix using assets/remedy-map.pdf: wrong or drifting object → Genjutsu Replace Object; soft or 480p footage → Upscale; wrong ratio → Reframe 16:9 to 9:16; broken shot → regenerate that shot only with the same Elements; muddy audio → regenerate with a clearer Sound line.
3. Replace an object: open Genjutsu, choose Replace Object, upload the clip and the new prop image, describe the swap. The motion, framing and timing stay; only the object changes.
4. Apply at least one more fix from the map. Test it on a Draft before spending on a final.
5. Re-score the cut with the same checklist and record before/after in the remedy table.
6. Compliance pass (K4): platform specs met, AI-content label ready, consent and rights recorded.
7. Screenshot the before/after frames and the completed remedy table for your evidence.

Prompts

Open **prompts.html** in this folder for one-click copy (or prompts.pdf to print).

DIAGNOSE THE CUT (SUPERCOMPUTER)

```
Here is my cut and my quality checklist. For every FAIL, give: the issue, the likely
cause, the Higgsfield fix
(Replace Object, Upscale, Reframe, regenerate one shot with the same Elements, or a new
Sound line) and the credit cost.
Order the fixes cheapest first. Table.
```

REPLACE AN OBJECT (GENJUTSU)

```
Replace the orange briefcase in this clip with the black hard-shell case in the
reference image. Keep the hand position, motion, lighting and timing exactly the same.
```

REGENERATE ONE SHOT ONLY

```
Regenerate shot 3 only. Same Elements (@char_biker, @loc_bar-interior), same framing and
timing. Fix: his face must match the reference sheet and the case stays in his left
hand.
```

Mock assets (assets/)

- remedy-map.pdf — issue → Higgsfield fix → typical credit cost
- remedy-table.csv — issue, cause, fix, before, after
- flawed-cut-notes.pdf — a worked example of a failing cut and its fixes

Evidence to keep

Screenshot these. The Practical Performance asks you to paste screenshots like them under each task.

- Before/after frames of each fix
- Your completed remedy table with the re-scored checklist

Check your work

> At least two FAILs are fixed with named Higgsfield tools, the re-score shows them as PASS, and the remedy table states the cause and credit cost of each fix.
